

DMPS3-4K-300-C

DMPS3-4K-200-C

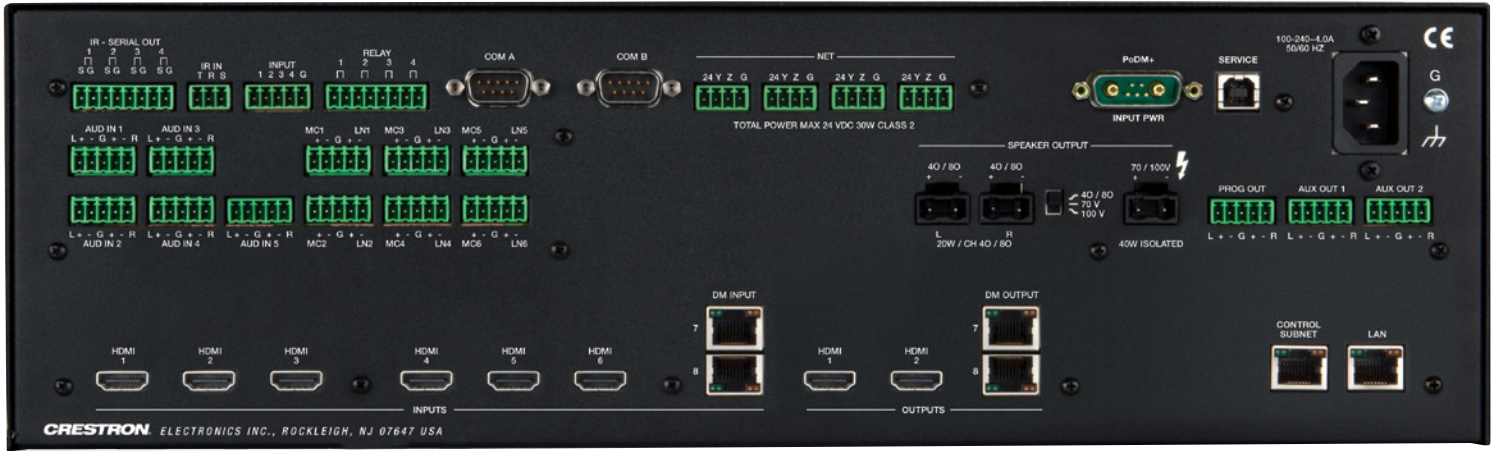

3-Series® 4K60 Digitalmedia Presentation Systems

Crestron set the industry standard with all-in-one DigitalMedia™ Presentation Systems. Now, the next generation DMPS3 Series resets the standard.

The new [DMPS3-4K-300-C](#) and [DMPS3-4K-200-C](#) feature 4K60, full support for HDCP 2.2, and Control Subnet. Like all DMPS3 Series, they feature a built-in 3-Series Control System® to deliver unmatched power and performance. Setup and touch screen control are simple using the web-based configuration tool, with no programming required.

4K60 with built-in scaling

The DMPS3-4K-300-C and DMPS3-4K-200-C feature scaled HDMI® outputs to transmit any resolution source to any resolution display.

Simple setup, consistent user experience

DMPS3 Series make installation and commissioning easier than ever. How easy? Thanks to its built-in exclusive .AV Framework™ technology, you can get a complete system up and running with no custom programming, and deliver a consistent user experience in every room.

Everything you need to deliver the highest quality presentation experience possible

The DMPS3-4K-300-C and DMPS3-4K-200-C combine trusted DigitalMedia™ technology with an IP-based 3-Series Control System®, 4K/60 multimedia switcher, mic mixer, and audio DSP in a single rack mountable package. DMPS3 Series deliver bit-for-bit, zero latency 4K60 video switching and display, including HDCP 2.2 protected content.

Control Subnet

In addition to the LAN port, the DMPS3-4K-300-C and DMPS3-4K-200-C each has a built-in Control Subnet port, which enables you to deploy a separate DM network. This makes system updates and troubleshooting faster, and requires just one IP address to connect the entire system to the LAN.

Wired for sound

DMPS3-4K-200-C and DMPS3-4K-300-C are designed to meet all your audio distribution needs. In addition to the built-in audio DSP and codec mixing, they provide breakaway audio routing, surround sound pass-through, 6-channel mic mixing, and integrated amplifier with field selectable outputs for preamp, 4/8ohm, and 70/100V.

Seamlessly add wireless

Wireless BYOD presentation capability can easily be added by connecting Crestron AirMedia® (AM-101) to the HDMI port.
