Crestron AirBoard™

Capture. Display. Share. Every Idea. Everywhere.

Today more people are learning, working, and training virtually, from more locations and on more diverse devices. And more people are looking to technology to help foster ideation, collaboration, and connection. **Introducing Crestron AirBoard: whiteboard capture system. AirBoard makes it easy to share ideas and stimulate participation across campuses and organizations around the world.**

Installs Easily

1. Any dry erase board can be a connected whiteboard.

2. Simply attach the camera arm above the board.

3. Click and pair with the same user interface you use now.

4. No new tool or program needed.

Display and Share Effortlessly

All it takes is a web browser to display or share content. So every viewer, whether they're in the room or participating remotely, can see whiteboard content on any device, in-room displays, laptops, tablets, and mobiles.

Collaborate Efficiently

AirBoard is designed to allow for integration with the most popular project management and note taking tools. AirBoard uses standard file formats (.PNG for snapshot and PDF for a timeline) that can be shared in almost any software tool.

Integrate Seamlessly

AirBoard works natively out of the box with AirMedia™ through DGE-100 or AM-200, or AM-300, for one seamless wireless experience on just one platform.

DGE-100   AM-200/300

CRESTRON

Packages

Choose. Build. Create your AirBoard solution.

Standalone: Standard Control and Sharing

Includes: AirBoard
Best for: Small tutorials, trainings that are laptop-centric and do not require integration with workplace technology or active-learning and connected classroom environments.

Out of the Box: Advanced Control and Sharing

Includes: AirBoard, AM-200/AM-300
Best for: Groups working remotely. Allows a user to wirelessly present. Gives presenter more control to add viewers to a session, start and stop a session, email content and create a timeline of content captured.

Custom: Create the Control and Sharing Experience That Suits Your Space

Includes: AirBoard, DGE-100
Best for: Groups working remotely. Presenter has more control to add viewers to a session, start and stop a session, email content and create a timeline of content captured. Opportunity to add additional AirBoard devices or expand audiences.

Unified Communications: Create a Completely Integrated and Customized Technology Environment

Includes: AirBoard, Flex Kit, AM-200 or AM-300
Best for: Creating a customized and fully integrated room system. Integrates video conferencing and wireless presentation, with capturing, sharing and remote viewing of whiteboard sessions.
